

Energy Star Homes...

Save Thousands of Dollars on Your Utility Bills

An **ENERGY STAR™** home must meet guidelines for energy efficiency set by the U.S. Environmental Protection Agency. These homes are at least 15% more energy efficient than homes built to the 2004 International Residential Code (IRC). Our tested and certified homes, which include additional energy-saving features, are typically 30% (or greater) more efficient than homes built to 2004 IRC.

Indiana Building Systems is proud to announce that all homes produced after December 1, 2008 will be **ENERGY STAR™** compliant*. High-performance, engineered, green homes are better for our homeowners and our environment. Increased energy efficiency, air quality, and stewardship of our natural resources will preserve our environment for future generations.

STANDARD ENERGY STAR™ FEATURES

- All EPA required Thermal Performance Modeling, and Factory Inspections*
- R19 exterior wall insulation
- R49 attic insulation
- Exterior wall and ceiling penetrations are sealed to minimize air infiltration
- Air-infiltration barrier wrap between exterior wall siding and sheathing
- Energy Star windows
- Energy Star refrigerator and dishwasher
- Energy Star water heater
- Energy Star exterior light fixtures

Additional Energy Saving Options

- Energy Star range hood
- Energy Star laundry appliances
- Energy Star furnaces
- HRV mechanical air exchange system
- Tankless water heaters

* Complete Energy Star™ certification requires on-site work by the builder and on-site independent inspection and testing by an EPA registered rater at additional cost.

Earn LEED or NAHB Green points with these additional standards and options

- **Water** (Reduced water usage with dual-flush toilets, reduced flow faucets, etc.)
- **Air** (Improved indoor air quality with low-emission materials and paint)
- **Earth** (Better stewardship of our planet's resources with sustainable materials like FSC lumber, engineered wood and bamboo or cork flooring and better factory processes like extensive recycling)
